COUNTERPETING Treasury notes is said to have become a lost art under the present national currency system. The national bank notes and greenbacks are so well known that counterfeits can be instantly detected by all intelligent persons, and hence it does not pay to run the risk of the severe penalties attached to the crine of counterfeiting to engage in this business. Skillful engravers can put their talents to better use and greater profit in au honest way. Bankers say that it is an uncommon thing to come across a counterfeit note of any kind. Gold and silver coins are now more easily and readily counterfeited than notes. This is because of the frequent changes in the dies of gold and silver coin. It is generally admitted that the American colnage of half or three fourths of a century ago, was more artistic than it is now. There should be no changes in the coinage of the country in century to century, or in the notes passing as currency as well. The more familiar the currency of the country is to the people the better, and this familiarity can be best secured by making no changes in the dies of the coins or notes from year to year.
